

CLAMSHELL BUCKETS

ROTOBEC
TOUGH HANDLING EQUIPMENT

MATERIAL MOVING MONSTERS OF ALL SIZES IMAGINABLE

OUT-LIFT, OUT-PERFORM, OUT-LAST.

Rotobec Clamshell Buckets set the industry benchmark for strength and durability. Our line of Clamshells range in size from 1.14 m³ all the way up to a whopping 10.7 m³ capacity. Within our lineup, we offer a variety of different series including: Light duty, standard duty and heavy duty, each of which has been designed to provide the maximum level of performance based on the type of material being handled. When it comes to clamshell buckets, there is simply no other manufacturer capable of matching the toughness and versatility of a Rotobec.

OUT-LIFT

The cylinders of our Clamshell Buckets are 100% designed, manufactured and assembled in-house. This allows us to guarantee that each cylinder meets the quality standards you deserve. Our cylinders are rated at **345 BAR** ensuring that you have all the closing force you could ever need.

OUT-PERFORM

Our Clamshells are available with reversible **BOLT-ON CUTTING EDGES**, which literally doubles the life of your bucket's edge. We also offer models with a **LEVEL CUT DESIGN** for dredging applications.

OUT-LAST

Where other manufacturers only use a high-tensile steel in small sections of the bucket, Our Clamshell Buckets are fabricated almost entirely of **HIGH-TENSILE STEEL**, which will significantly extend the life of your bucket.

THE FORCE IS WITH YOU QUAD-CYLINDER DESIGN FOR OPTIMAL PERFORMANCE

WORLD CLASS CYLINDERS

Our Clamshell Buckets come equipped with four Rotobec cylinders, each rated at 345 bar. The quad-cylinder design ensures the optimal force distribution on each corner of your bucket providing maximum loads each and every time.

THE KING OF ROTATORS WE'RE CALLED ROTO-BEC FOR A REASON

ONE ROTATOR TO RULE THEM ALL

For the last 40 years, Rotobec has been pushing the boundaries of innovation in the world of rotator design. The rotators on our Clamshell Buckets are no exception. In addition to standard 360° rotation and a fully supported pinion gear, all of our rotations are fully sealed, allowing them to be fully submerged in water up to 4.6 m deep. Our rotators are without a doubt the most advanced and longest lasting ever made. Why settle for anything but the best?

TOUGH HANDLING EQUIPMENT

GARRA ORANGE PEEL

ROTOBEC
MAQUINARIA DE MANIPULACIÓN A TODA PRUEBA

LA INNOVACIÓN Y LA BELLEZA REUNIDAS LEVANTA COMO NINGUNA OTRA, SOBRE-CALIFICADA Y SÚPER-AVANZADA.

La garra de Rotobec es reconocida como el líder de la industria en lo que concierne a la innovación y la resistencia. La construcción delgada y robusta, así como la rotación corriente de 360° hacen de ésta garra una herramienta preciosa para poseer y utilizar. La garra está disponible en diferentes configuraciones: 4 uñas, cinco uñas y con Imán integrado. La garra de Rotobec traspasa los límites de las posibilidades. Está dotada de cilindros de alta presión de Rotobec y es una de las únicas en la industria que posee un sistema autónomo para el fluido hidráulico. Esas garras han revolucionado rápidamente el mundo de la manipulación de la chatarra. Aumenta la disponibilidad, reduce los costos de mantenimiento y domina la competencia.

LEVANTA COMO NINGUNA OTRA

Nuestras garras están equipadas con **CILINDROS DE 345 BAR** fabricadas por Rotobec. Nuestros cilindros son los más grandes de la industria, lo que garantiza una duración de vida más larga que el promedio y su construcción permite ofrecer un nivel inigualable de protección del cilindro.

SOBRECALIFICADA

Las uñas de nuestras garras hacen parte de una **ESTRUCTURA SIMILAR A UNA CAJA** que ofrece un nivel de fuerza y de durabilidad máxima. A fin de aumentar la durabilidad, la superficie interna de nuestras garras está construida con una **PLACA DE ACERO DE 1,6 CM** muy robusta.

SUPERAVANZADA

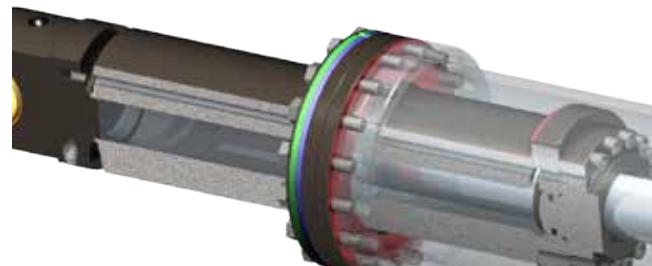

Nuestras garras comprenden también los **TOPES MECÁNICOS AJUSTABLES PATENTADOS** por Rotobec que compensan el desgaste inevitable de las garras. Esta característica permite obtener el cierre completo de las garras igual que cuando las puntas están desgastadas. Con el fin de asegurarse que el desgaste no llegue muy rápidamente, la punta de las garras está construidas con un acero **ALTAMENTE RESISTENTE** al desgaste que ofrece una resistencia a la abrasión 50% mejor que el AR-500 normal.

CILINDROS DE LARGA VIDA UTIL

DISEÑO INNOVADOR. RESULTADOS INCREÍBLES

SISTEMA HIDRÁULICO AUTÓNOMO

El desplazamiento de la chatarra es la tarea más intensa para una garra. En ese caso, la amenaza cotidiana para el operador es el deterioro de los cilindros y de las mangueras. Con el fin de proteger su valor agregado más preciado, nosotros hemos fabricado un cilindro que ha revolucionado la industria. Nuestro cilindro contiene una canalización hidráulica interna que elimina la necesidad de una manguera de retorno. Este sistema autónomo ofrece un cilindro que está mejor protegido y es más durable que cualquier otra opción disponible en el mercado.

UNA PROTECCIÓN DE 360°

La concepción de este cilindro autónomo e innovador nos ha permitido introducir un protector de cilindro que ofrece una protección de 360°. Como no es necesario hacer una abertura en la parte de atrás del protector del cilindro para la manguera de retorno, la garra de Rotobec ofrece un nivel de protección inigualable. Reduzca el tiempo de inmovilización y entre al futuro del desplazamiento de la chatarra.

EL REY DE LOS ROTORES

NO ES POR NADA QUE EL NOMBRE DE NUESTRA EMPRESA ES **ROTO-BEC**.

UN ROTOR QUE DOMINA EL MERCADO

Desde hace más de 40 años, Rotobec innova el mundo de la fabricación de los rotadores. Los rotadores de nuestra garra no son la excepción. Todas nuestras rotaciones están completamente selladas os con el fin de protegerlas os de los elementos y de ofrecer una rotación de 360° y un engranaje de piñones completamente sostenido. Sin ninguna duda nuestros rotadores son los más evolucionados y los más durables que jamás se hayan fabricado. Porque contentarse con menos?

NOSOTROS TENEMOS LO QUE USTED

NECESITA

DISEÑO DE PUNTA. RESULTADOS AVANZADOS

MANGUERAS BIEN ESCONDIDAS

Las mangueras proporcionan un elemento vital a la garra. Su protección es esencial para asegurar el funcionamiento eficaz y nosotros hemos dedicado grandes esfuerzos para garantizar su seguridad. Nuestras mangueras están colocadas de forma que queden protegidas del peligro y hemos agregado un protector impenetrable con el fin de prevenir la ruptura de las mangueras, la cual es costosa.

FORESTRY SOLUTIONS

ROTOBEC
TOUGH HANDLING EQUIPMENT

LOOKING FOR AN UPGRADE? OUT-LIFT, OUT-PERFORM, OUT-LAST.

Rotobec products are used by thousands of customers in over 40 countries around the world. We are proud to design and manufacture almost every component of our products, which ensure that no compromises are made on quality. Rotobec forestry grapples are the toughest available, backed by an industry-leading warranty. Go for more uptime. Go for Rotobec forestry grapples.

FORWARDER/BUNCHING GRAPPLES

100% HIGH-STRENGTH STEEL IN MY BODY

- Provides great durability.
- Abrasive resistant material.

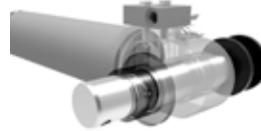

IN-HOUSE HIGH PRESSURE CYLINDER

- 345 bars cylinders eliminates need to lower operating pressure.
- Bolt-on cylinder head makes maintenance easier than threaded/screw head.

OVERSIZED JAW AND CYLINDER PINS

- Oversized chromed and tempered pins.
- Alu-bronze, spiral-cut bushings.
- Fully sealed bushings.

Tired of changing forwarder grapple every 5000 hours?

COMBINATION GRAPPLES

HEAVY-DUTY ROTATOR

- Robust construction.
- Extended life time.
- Easy and cost effective maintenance.

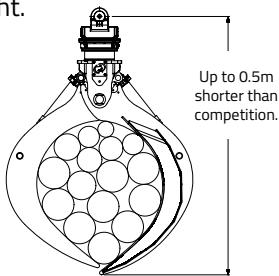

IN-HOUSE HIGH PRESSURE CYLINDER

- 345-bar cylinder provides outstanding closing force.
- Bolt-on cylinder head makes maintenance easier than threaded/screw-on head.
- Cushioned cylinder reduces impact on grapple's structure.

SHORTEST BYPASS GRAPPLE ON THE MARKET

- Allows for more stacking height.

MECHANICAL STOPS

- Protects structure and cylinders in opening and closing motion.

SINGLE PIN DESIGN

- Eliminates need for fussy synchro gears.

STRUCTURE DESIGNED WITH FINITE ELEMENT ANALYSIS (FEA)

- For optimal strength-to-weight ratio.

100% HIGH-STRENGTH STEEL

- Provides great durability.
- Abrasive resistant material.
- AR400 tips for longer life.

PULPWOOD GRAPPLES

IN-HOUSE HIGH PRESSURE CYLINDER

- 345-bar cylinder provides outstanding closing force.
- Bolt-on cylinder head makes maintenance easier than threaded/screw-on head.
- Cushioned cylinder reduces impact on grapple's structure.

IMPACT RELIEF VALVE

- Protects structure and hydraulic.

MECHANICAL STOPS

- Protects structure and cylinders in opening and closing motion.
- Eliminate possibility to bottom out the cylinders.

100% HIGH-STRENGTH STEEL

- Provides great durability.
- Abrasive resistant material.
- AR400 tips for longer life.

OVERSIZED JAW AND CYLINDER PINS

- Oversized chromed and tempered pins
- Alu-bronze, spiral-cut and fully sealed bushings.

LEVELING PLATE

- Optional log leveling side plate (not shown).

JAW DESIGN

- Closed box construction jaw, more robust than open jaw design.

RPA POWER ATTACHMENTS

FEATURES

- Simple installation due to valve integrated inside rotator head
- Optional twin-motor rotator for additional swing torque

RAKE

The Rake configuration is used primarily by the forestry industry. The curvature of the jaw makes this an ideal tool for handling logs in hoe chucking and chipper feeding applications.

PULP

The Pulpwood RPA is an alternative to our standard Pulpwood Grapples. It features a specialized jaw shape that allows it to handle large bunches in loading and unloading applications.

BUTT'N TOP GRAPPLERS

Rotobec Butt'n Top Grapples are an excellent solution for the loading and unloading of tree length wood. These grapples feature four of Rotobec's own 345 bar high-pressure cylinders, which provide an unbeatable level of control and stability over your load. We offer both a bunching as well as a sorting configuration, so there is a perfect option for you regardless of the type of wood you are handling.

FEATURES

- Independent stabilizers
- Integrated valve mounted inside the rotator head to ease installation
- Interlocked head for increased durability
- Optional twin motor rotator for increased swing torque

WASTE GRAPPLE

ROTOBEC
TOUGH HANDLING EQUIPMENT

THE ULTIMATE WASTE MOVING TOOL OUT-LIFT, OUT-PERFORM, OUT-LAST.

The Rotobec Waste Grapple is up for anything. This grapple is used almost exclusively in waste material handling applications, including wood waste, as well as waste transfer stations. The extra wide jaw and elongated head structure enables operators to grab large loads, while the holes allow small debris to fall through. Each configuration is available with either a dangle rotation or one of Rotobec's incredible positioned rotations featuring bolt-on lugging. Backed by Rotobec's industry leading, 18 month/ 3,000 hour warranty and our world class service, the Waste Grapple is quite simply the world's greatest waste handling attachment.

OUT-LIFT

The Waste Grapple comes equipped with Rotobec's own built-in-house **345 BAR CYLINDERS**. Our cylinders are the largest in the industry guaranteeing a longer than average life. They are also protected by robust 1 cm steel **CYLINDER GUARDING**.

OUT-PERFORM

The Waste Grapple jaws feature a **BOX STYLE STRUCTURE** which provides the maximum level of strength and durability. To enhance durability further, we have incorporated an **INTERLOCKING DESIGN** on the elongated head structure and the cylinder guards.

OUT-LAST

MECHANICAL STOPS have been engineered into the grapple design to protect the cylinder from over/under extension. Our positioned rotations feature a **FULLY SUPPORTED PINION GEAR** to prevent pinion bending, which will cause significant damage to your gears. The Waste Grapple also features **OVERSIZED, CHROMED AND HARDEND PINS**, which will drastically extend the life of your grapple.

THE KING OF ROTATORS

WE'RE CALLED ROTO-BEC FOR A REASON

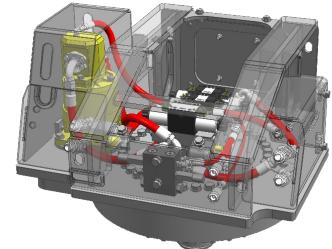

BOLT-ON LUGGING

Rotobec is famous for many things but we got our start building the world's most advanced continuous 360° rotators. Our positioned rotators come standard with bolt-on lugging. This technology makes the installation process a breeze and allows for the attachment to be transferred easily between machines increasing the versatility of your operation.

VALVE-ON-SWIVEL

Positioned rotators can become troublesome because of the number of channels required to simultaneously operate all of the grapples hydraulics. One way to achieve this is to add additional hydraulic components to your machine, but we have a far more effective, and far less expensive alternative. Our positioned rotators offer an integrated valve-on-swivel (VOS), which allows operators to have complete control over all movements of their grapple, without the need for adding additional hydraulics to your machine.
